

## Press release

**Date:** 4/28/2025

### **New Tool Rebels headquarters**

With a new building complex on its premises in Wuppertal-Cronenberg, the international tool manufacturer Wera has created conditions for further growth. The architectural design of the new headquarters is as extraordinary as the product innovations with which the Wuppertal-based company, known in the industry as the Tool Rebels, continues to inspire craftsmen, retailers, and industry.

The facade, which is constantly admired by visitors and passers-by, was inspired by Wera's signature Kraftform screwdriver: the curved wave shape of the building's architecture is based on the design of the Kraftform handle. The unusual facade is not only visually striking but also presents a particular construction challenge. Each pane element is individually curved and therefore unique.

Today, the glass Wera wave combines old and new parts of the building into a modern administrative location that is geared towards the further growth of the tool manufacturer and offers suf-

efficient space for new developments. According to their own statements, the Tool Rebels want to continue to live up to their name in the future by constantly questioning the tried and tested and searching for new solutions.

Captions:

The new Wera headquarters echoes the curved lines of the Kraftform handle, for which the tool manufacturer is well known.
